Section 1: Foundational concepts

1. Business Analytics

-Using data and tools to make better business decisions and improve performance. It focuses on solving business problems using data.

Example: A company analyzes sales data to increase profits

2. Data Analytics

The process of examining raw data to find patterns and insights. It focuses more on data itself than business decisions

3. Business intelligence (BI)

Tools and systems used to report and visualize data for decision-making. It mainly shows what is happening now or in the past.

4. Data-Driven Decision making

Making decision based on data instead of guesses or opinions. It improves accuracy and reduces risk

5. Big data

Very large and complex data that cannot be handled by normal tools. It includes high volume, speed and different types.

6. Descriptive Analytics
Explains what happened in the past using data. It summarizes historical data.

7. Diagnostic Analytics
Explain why something happened by analyzing data deeper

8. Predictive Analytics
Uses data to predict what is likely to happen in the Future

9. Prescriptive Analytics
Suggests actions to take based on data insights

10. Data literacy
The ability to read, understand and use data correctly.

Section 2: DATA, MEASUREMENT & REPORTING

11. Structured Data
Data organized in rows and columns, like tables.

12. Unstructured Data
Data that is not organized, like text, images or videos

13. Data warehouse
A central place where large amounts of data are stored for analysis

14. Data Mining
The process of finding patterns and useful information in large data sets

15. Data visualization
Presenting data using charts, graphs or visuals

16. Dashboard
A visual display of important data and KPIs in one place

17. Metric
Any measurable value used to track performance

18. Key performance indicator (KPI)
A metric that is important for achieving business goals

19. Benchmark
A standard used to compare performance

20. Segmentation
Dividing customers into groups based on characteristics.

Section B: Customer & Sales KPIs

21. Conversion Rate
The percentage of people who take a desired action

22. Customer Acquisition Cost (CAC)
The cost of getting one new customer

23. Customer lifetime Value (CLV/LTV)
The total value a customer brings over time

24. Churn Rate
The percentage of customers who stop using a service

25. Customer Retention Rate
The percentage of customers who stay with a business

26. Net promoter Score (NPS)
Measures how likely customers are to recommend a business

27. Average order Value (AOV)
The average amount spent per purchase

28. Sales Funnel
The stages a customer goes through before buying.

Section 4: Marketing & Campaign Analytics

29. Marketing Campain
A planned set of activities to promote a product or service

30. Post-Compaign Analysis
Reviewing campaign results to see what worked

31. Incremental Revenue
Extra revenue earned because of a compaign

32. Return on Investment (ROI)
Measures profit compared to cost

33. Return on Ad Spend (ROAS)
Revenue earned for every amount spend on Ads

34. Click-Through Rate (CTR)
percentage of people who click on a ad

35. Bounce Rate
Percentage of visitors who leave a website quickly

36. A/B Testing
Comparing two versions to see which performs better

37. Lead Generation
Getting potential customers interested in your product

38. Marketing Attribution.
Identifying which marketing channel led to a sale
